Summary

This Development Servicing Plan (DSP) covers water supply and sewerage developer charges for the Snowy Monaro Regional Council Local Government Area.

This DSP has been prepared in accordance with the 2016 Developer Charges Guidelines for Water Supply, Sewerage and Stormwater issued by the Minister for Lands and Water, pursuant to section 306 (3) of the *Water Management Act, 2000.*

The area covered by each DSP, and the existing and proposed works serving the area, are shown on the plans in Section 13.

The timing and expenditure for works serving the area covered by each DSP are shown in Section 15 and Section 16.

Levels of service to be provided in each DSP area are summarised in Section 5.

The water supply and sewerage developer charges for the areas covered by this DSP document have been determined as follows:

The developer shall be responsible for the full cost of the design and construction of water supply and sewerage reticulation works within subdivisions.

Background information containing all the critical data including calculation models behind each DSP is available on request.

1 Introduction

Section 64 of the *Local Government Act, 1993* enables a local government council to levy developer charges for water supply, sewerage and stormwater. This derives from a cross-reference in that Act to Section 306 of the *Water Management Act 2000.*

A Development Servicing Plan (DSP) details the water supply, sewerage and/or stormwater developer charges to be levied on development areas utilising a water utility's water supply, sewerage and/or stormwater infrastructure.

This DSP covers water supply and sewerage developer charges for areas served by Snowy Monaro Regional Council (SMRC).

This DSP has been prepared in accordance with the 2016 Developer Charges Guidelines for Water Supply, Sewerage and Stormwater issued by the Minister for Lands and Water, pursuant to section 306 (3) of the *Water Management Act, 2000.*

This DSP document supersedes any other requirements related to water supply and sewerage developer charges for the areas covered by this DSP. This DSP takes precedence over any of Council's code or policies where there are any inconsistences relating to water supply and sewerage developer charges.

4 Water Supply and Sewerage Infrastructure

4.1 Water Supply

SMRC currently operates and maintains eleven separate water supply schemes. A brief description of these schemes is provided in the following sections.

4.1.1 Adaminaby

The Adaminaby water supply scheme sources water from Lake Eucumbene with an intake pump station located at Observation Point. Water treatment is limited to chlorination and fluoridation only. Treated water is supplied to the Adaminaby township.

4.1.2 Berridale

The Berridale water supply scheme extracts and sources water from Lake Jindabyne at the East Jindabyne intake pump station. Water is treated via chlorination and is fluoridated prior to distribution to properties in Berridale. There is no filtration process.

4.1.3 Bombala

The Bombala water supply scheme sources raw water from the Coolumbooka River via a river off-take. Raw water is treated in a conventional WTP including coagulation, flocculation, clarification and filtration followed by disinfection. Treated water is supplied via a distribution network consisting of two reservoirs, trunk water mains and a reticulation network.

4.1.4 Bredbo

The Bredbo water supply scheme sources water from two bores adjacent to the Murrumbidgee River. Water is first treated by aeration then chlorinated. Treated water is pumped to a roofed storage prior to delivery to consumers.

4.1.5 Cooma

The Cooma water supply scheme sources water from the Murrumbidgee River via a river off-take. Raw water undergoes full treatment (coagulation, flocculation, clarification and filtration) prior to further treatment using Powdered Activated Carbon in case of taste, odour and algal problems in the raw water supply. Treated water is chlorinated then transferred to the Snowy ballast reservoirs. From here, water then gravitates to Pine Range, Royal Hill and Church Hill storages prior to distribution to the reticulation network in Cooma.

4.1.6 Dalgety

The Dalgety water supply scheme sources water from the Snowy River downstream of the confluence point with Wullwye Creek. Raw water is first “conditioned” for the oxidation of soluble iron, manganese and organic matter, filtered and then chlorinated. Treated water is pumped to a reservoir which then gravitates to the distribution network for supply to the Dalgety township.

4.1.7 East Jindabyne

The East Jindabyne water supply scheme sources water from Lake Jindabyne. Raw water is chlorinated and fluoridated. Treated water is delivered to properties in East Jindabyne, Alpine Sands, Rainbow Beach and Tyrolean Village.

4.1.8 Eucumbene Cove

The Eucumbene Cove water supply scheme sources water from a take-off point inside the Eucumbene Dam outlet tunnel where water is extracted from deep within the dam storage. Water is chlorinated then supplied to the system. There is no DSP for the Eucumbene Cove water supply system as there is no potential for additional development or subdivision in Eucembene Cove.

4.1.9 Jindabyne

The Jindabyne water supply scheme currently sources water from near the dam wall of Jindabyne Dam. Raw water is chlorinated and fluoridated prior to distribution to the Jindabyne township.

4.1.10 Kalkite

The Kalkite water supply scheme sources water from Lake Jindabyne. Raw water is chlorinated prior to distribution to the Kalkite township.

4.1.11 Nimmitabel

The Nimmitabel water supply scheme sources water from both a weir pond on the MacLaughlin River and two town bores. Raw water is pumped to an enclosed reservoir, then is disinfected prior to distribution to the Nimmitabel township.

4.2 Sewerage

SMRC operates and maintains eight sewerage schemes. Bredo, Dalgety and other villages in the LGA do not have reticulated sewerage schemes.

4.2.1 Adaminaby

The Adaminaby sewerage scheme consists of 5.8 km of gravity sewer mains. The Adaminaby sewage treatment plant (STP) is a trickling filter plant with a design capacity of 300 EP. Treated effluent is discharged into Locker Creek.

4.2.2 Berridale

The Berridale sewerage scheme consists of a gravity network of pipes and manholes. The Berridale STP is an intermittently decanted extended aeration (IDEA) based plant with UV disinfection. Tertiary treated effluent is discharged to Myack Creek which is a tributary of Wullwye Creek. There is an effluent reuse scheme for utilisation of treated effluent at Coolamatong Golf Course.

4.2.3 Bombala

The Bombala sewerage scheme contains a trickling filter based plant constructed in 1967 with some upgrades since then. Treated effluent is discharged into the Bombala River.

4.2.4 Cooma

The Cooma sewerage scheme consists of five sewage pump stations (SPSs), a gravity drainage network of pipes, 19.3 km of trunk mains and 6.6 km of rising mains. The Glen STP is an activated sludge (IDEA) based plant which receives sewage from the Cooma township. Treated effluent is discharged to Cooma Creek in accordance with Council's EPA licence or reused at the STP.

4.2.5 Jindabyne

The Jindabyne sewerage scheme collects sewage from Jindabyne, East Jindabyne and Tyrolean Village and transports it to the Jindabyne STP. The sewerage scheme was augmented in 1982 with the construction of a

completely new STP and four new SPSs. The STP is an IDEA based plant with treated effluent discharged into Cobbon Creek. There are 15 operational SPSs within the Jindabyne and East Jindabyne sewerage schemes, eight of which are located in the Jindabyne sewerage scheme.

The East Jindabyne sewerage scheme collects sewage from East Jindabyne, Tyrolean Village, Rainbow Beach and Alpine Sands. All sewage from these townships are transported to the Jindabyne STP via a series of SPSs and a pipeline across the Jindabyne dam wall. Sewage from East Jindabyne is delivered to the Jindabyne STP via a pipeline constructed along the Kosciuszko Road and across the Jindabyne dam wall.

4.2.6 Kalkite

The Kalkite sewerage scheme services the township of Kalkite. The scheme consists of three SPSs. The Kalkite STP is a Pasveer Channel based process with treated effluent discharged into an evaporation pond.

4.2.7 Nimmitabel

The Nimmitabel sewerage scheme consists of two SPSs, 7.4 km of reticulation mains and 0.7 km of rising mains. The Nimmitabel STP is a 500 EP Pasveer Channel based plant with treated effluent discharged into Bobundara Creek under licence conditions.

4.3 Existing Capital Costs

The estimated MEERA capital cost of water supply and sewerage capital works (including backlog works) servicing the areas covered by this DSP document are shown in Section 15. Note that only those assets constructed in the last 30 years are included in the calculation of the charges.

4.4 Future Capital Works Program

The timing and expenditure for water supply and sewerage capital works (including backlog works) servicing the area covered by this DSP document are shown in section 16.

4.5 Reticulation Works

The developer shall be responsible for the full cost of the design and construction of water supply and sewerage reticulation works within subdivisions

5 Levels of Service

Council's Level of Service are outlined in its Draft Asset Management Plans for Water Supply Services and Sewerage Services. Council has defined service levels in two terms:

- Customer Levels of Service relate to how the community receives the service in terms of safety, quality, quantity, reliability, responsiveness, cost/efficiency and legislative compliance.
- Supporting the community service levels are operational or technical measures of performance developed to ensure that the minimum community levels of service are met

At time of writing the Asset Management plans, Council was in the process of community consultation on a number of proposed funding scenarios which will have impact on future budgets and service levels. The outcome of these consultations will be incorporated into future revisions of the Asset Management Plans.

7 Developer Charges Calculation – Water Supply

All new properties and properties with change in use which are subject to payment of water supply charges are liable for payment of developer charges for water supply. An ET is the basic unit to determine the demand that the development will place on the water supply system. One ET represents the equivalent demand from a single, detached residential dwelling.

Credit for existing use is applied in the calculation of the ET loadings, as the developer charges are levied for additional ET loading only. For example, the first lot in a residential subdivision is exempt from developer charges where the lot is already connected to the water supply system. Properties not already rated for water supply do not receive the one lot credit.

7.1 Summary

The developer charges for the area covered by this DSP document area are summarised in Table 7-1.

The water supply service areas and the basis of determining the service areas are as follows:

Service Area	Basis of Determining the Service Area
Adaminaby	Separate small town or village
Nimmitabel	Separate small town or village
Dalgety	Separate small town or village
Bombala	Separate small town or village
East Jindabyne & Berridale	Area serviced by a separate water supply distribution system
Delegate	Separate small town or village
Bredbo	Separate small town or village
Jindabyne	Area serviced by a separate water supply distribution system
Cooma	Area serviced by a separate water supply distribution system
Kalkite	Separate small town or village

7.3 Equivalent Tenements (ETs)

For each service area, the number of ETs to be served has been determined as the estimated annual water to be supplied to the service area divided by the volume of 1 ET. The average annual residential water consumption for 2020/21 (the calculation year) was 159 kL per property. ET projections for each service area are shown in Table 7-2. The ETs in January 1996 are also provided.

ET calculation details for each service area are shown in Section 14.

7.4 Capital Charge

The capital charge for each service area covered by this DSP document has been calculated using the NPV spreadsheet method.

Under the NPV spreadsheet method, the capital cost of relevant assets and projected ETs served in a service area are entered into a spreadsheet. These capital costs are only for the share of the asset capacity used in the service area. The PV of capital cost and the PV of new ETs are calculated, and the capital charge per ET is the PV of the capital cost divided by the PV of the ETs. A 3% discount rate was applied for pre-1996 infrastructure and a 5% discount rate was applied to post 1996 and future assets, in accordance with the DPI guidelines.

Calculation details for PV of ETs and PV of capital costs for each service area are shown in Section 17. The summary of the capital charge calculations is shown in Table 7-3.

7.6 Reduction Amount

SMRC has adopted the NPV of Annual Bills method to calculate the Reduction Amount. This method involves calculation of the PV of the future net income, which is the difference between the revenue from annual bills, and annual OMA cost, projected for new development over the next 30 years. This is divided by the PV of the new ETs over 30 years to give the reduction amount. SMRC has a single tariff structure for all towns and villages. The reduction amount calculations are shown in Table 7-6. The annual bill and OMA costs were calculated using data from the Special Purpose Financial Statement Income Statement – Water Supply Business Activity for the year ended June 2021 and are summarised below:

Annual bill at the commencement of the DSP = $649 per ET
OMA Cost at the commencement of the DSP = $449 per ET
Net income = Annual bill – OMA cost = $200 per ET

7.7 Cross-Subsidy

The cross-subsidy is the difference (%) between the annual bill with the calculated maximum developer charge and the proposed lower developer charge.

LWUs may elect to cap the developer charges for small villages in order to maintain affordability and to avoid 'stranded' assets in such villages. LWUs may also cap other developer charges to maintain affordability, subject to adopting a commercial developer charge which recovers a significant proportion of the capital cost of the infrastructure.

SMRC has decided to apply a cross subsidy to reduce the developer charges in Adaminaby, Dalgety, Nimmitabel and Kalkite to be the same as the calculated charge for DSP Area D (which covers Jindabyne, East Jindabyne and Berridale, Bombala, Bredbo and Cooma). The rationale for applying the cross subsidy is to maintain affordability in villages and small towns.

The cross-subsidy, resulting from capping of developer charges must be disclosed in the DSP, the utility's Annual Report, annual Operational Plan and in communication materials for consultation with stakeholders as noted above.

Two options were developed and examined as follows:

Option 1 – No cross subsidy – Calculated maximum developer charge

Option 2 – Cross subsidy - to reduce the Adaminaby, Dalgety, Nimmitabel and Kalkite charges to be equal to DSP Area D charge – adopted.

A summary of the developer charges option and cross-subsidy is shown in Table 7-7.

8 Developer Charges Calculation – Sewerage

All new properties and properties with change in use which are subject to payment of sewerage charges are liable for payment of developer charges for sewerage. An ET is the basic unit to determine the loading that the development will place on the sewerage system. One ET represents the equivalent loading from a single, detached residential dwelling.

Credit for existing use is applied in the calculation of the ET loadings, as the developer charges are levied for additional ET loading only. For example, the first lot in a residential subdivision is exempt from developer charges where the lot is already connected to the sewerage system. Properties not already rated for sewerage do not receive the one lot credit.

8.1 Summary

The developer charges for the area covered by this DSP document area are summarised in Table 8-1.

Table 8-1 Summary of Proposed Water Supply Developer Charges for Sewerage

These amounts have been calculated on the basis of the information presented in Sections 8.2 to 8.6.

8.2 Service Areas

The sewerage service areas and the basis of determining the service areas are as follows:

Service Area	Basis of Determining the Service Area
Adaminaby	Separate small town or village
Berridale	Separate small town or village
Bombala	Separate small town or village
Cooma	Area serviced by a separate sewage treatment works
Delegate	Separate small town or village
Jindabyne	Area serviced by a separate sewage treatment works
Kalkite	Separate small town or village
Nimmitabel	Separate small town or village

8.3 Equivalent Tenements (ETs)

For each service area, the number of ETs to be served has been determined as the measured average dry weather flow (ADWF) at the STP divided by the volume of 1 ET. The ADWF per equivalent person (EP) was assumed to be 150 L/EP/day and the EP to ET conversion rate was based on the occupancy rate obtained from Census data. There was no data on the measured ADWF for Delegate and Kalkite; the sewer ETs were assumed to be equal to the water supply ETs for these service areas. ET projections for each service area are shown in Table 7-2. The ETs in January 1996 are also provided.

ET calculation details for each service area are shown in Section 14.

8.4 Capital Charge

The capital charge for each service area covered by this DSP document has been calculated using the NPV spreadsheet method.

Under the NPV spreadsheet method, the capital cost of relevant assets and projected ETs served in a service area are entered into a spreadsheet. These capital costs are only for the share of the asset capacity used in the service area. The PV of capital cost and the PV of new ETs are calculated, and the capital charge per ET is the PV of the capital cost divided by the PV of the ETs. A 3% discount rate was applied for pre-1996 infrastructure and a 5% discount rate was applied to post 1996 and future assets, in accordance with the DPI guidelines.

Calculation details for PV of ETs and PV of capital costs for each service area are shown in Section 17. The summary of the capital charge calculations is shown in Table 8-3.

8.6 Reduction Amount

SMRC has adopted the NPV of Annual Bills method to calculate the Reduction Amount. This method involves calculation of the PV of the future net income, which is the difference between the revenue from annual bills, and annual OMA cost, projected for new development over the next 30 years. This is divided by the PV of the new ETs over 30 years to give the reduction amount. SMRC has a single tariff structure for all towns and villages. The reduction amount calculations are shown in Table 8-6. The annual bill and OMA costs were calculated using data from the Special Purpose Financial Statement Income Statement – Sewerage Business Activity for the year ended June 2021 and are summarised below:

Annual bill at the commencement of the DSP = $742 per ET
OMA Cost at the commencement of the DSP = $586 per ET
Net income = Annual bill – OMA cost = $156 per ET

8.7 Cross-Subsidy

The cross-subsidy is the difference (%) between the annual bill with the calculated maximum developer charge and the proposed lower developer charge.

LWUs may elect to cap the developer charges for small villages in order to maintain affordability and to avoid 'stranded' assets in such villages. LWUs may also cap other developer charges to maintain affordability, subject to adopting a commercial developer charge which recovers a significant proportion of the capital cost of the infrastructure. SMRC has decided to apply a cross subsidy to reduce the developer charges in Bombala and Delegate to be the same as the calculated charge for Nimmitabel. This cross subsidy reduces the number of DSP areas as part of Area B and all of Area C have the same proposed charge as Area D. The rationale for applying the cross subsidy is to maintain affordability and avoid stranded assets in small towns and villages.

The cross-subsidy, resulting from capping of developer charges must be disclosed in the DSP, the utility's Annual Report, annual Operational Plan and in communication materials for consultation with stakeholders as noted above.

Two options were developed and examined as follows:

Option 1 – No cross subsidy – Calculated maximum developer charge

Option 2 – Cross subsidy - to reduce the Bombala and Delegate charges

A summary of the developer charges option and cross-subsidy is shown in Table 8-7.

9 Reviewing/ Updating of Developer Charges

Developer charges will be adjusted on 1 July each year on the basis of movements in the CPI for Sydney, in the preceding 12 months to December, excluding the impact of GST.

Developer charges will be reviewed by Council after a period of 4 to 8 years.

Notes & Assumptions:
Growth rates were generally adopted from .id forecasts projections through 2041 with some exceptions as agreed with Council and listed be
1. Assume one new ET per year in Adaminab
2. Bombala growth rate was based on .id forecast for new dwellings as projected population growth rate is neg
3. For Bredbo, the growth rate for Rural East was adopted instead of the higher Canberra Corridor growth
4. East Jindabyne and Bernidale had slightly different growth rates - an average of the two growth rates was adju
Limited information was available to calculated historical growth rates due to changes in LGA and Census boundaries. The historical growth rate from 1996 to 2022 was assumed to be the same as the forecast grow
The growth rate beyond 2042 was assumed to be the same as the growth rate from 2022-2042 (with the exception of Kalkite which adopted growth rates based on the Planning proposal information from 2022.

Notes & Assumptions:
ADWF (L/EP/day) adopted = 150 The value of 200 L/EP/Day in the Developer Charges guidelines resulted in Sewer ET values that were much lower than Water ET
Where metered ADWF data was not avialable, Sewer ET's were assumed to be equal to Water ET's (i.e. in Delegate and Kalkite)
Growth rates were generally adopted from .id forecasts projections through 2041 with some exceptions as agreed with Council:
1. Assume one new ET per year in Adaminaby
2. Bombala growth rate was based on .id forecast for new dwellings as projected population growth rate is negative
4. East Jindabyne and Berridale had slightly different growth rates - an average of the two growth rates was adopted
Limited information was available for historical growth rates due to changes in LGA and Census boundaries. The historical growth rate from 1996 to 2022 was assumed to be the same as the forecast growth rate
The growth rate beyond 2042 was assumed to be the same as the growth rate from 2022-2042, with the exception of Kalkite as 2022-2042 growth rate was based on the Planning proposal information
The growth rate beyond 2042 was assumed to be the same as the growth rate from 2022-2042, with the exception of Kalkite as 2022-2042 growth rate was based on the Planning proposal information
